Description

Pavilion L

Designer
Kettal Studio

Collection
Pavilions

Landscape aims to be part of a project. It is not understood as an item apart, but instead relates to its environment and melds with it. It is the project that is important, not the product, and this is its essence. Its rationalist construction seeks to give order, form and structure to the outdoor space, although, in terms of function, it has been designed to give shelter: to shade and cool or protect from the rain and wind.
